

Kaspersky Professional Services Vulnerability and Patch Management

Kaspersky Vulnerability and Patch Management enhances your security and reduces complexity with automated updates. It ensures that when cybercriminals try to exploit unpatched vulnerabilities in your operating systems and common applications, they're met with an impenetrable wall.

Get the most from your vulnerability and patch management

To optimize your security, why not let our experts activate Kaspersky Endpoint Security's vulnerability assessment and patch management functionality for you? They'll find and fix vulnerabilities, and prioritize and automate the update process.

- ✓ A seamless implementation done right, right away
- ✓ No compatibility issues
- ✓ No performance problems
- ✓ A single, integrated management console for centralized, automated security and management
- ✓ A clean slate - a fully patched and updated system that's easily maintained through your Kaspersky Security Center console.

Let our experts be your experts

Our experts will carry out all requisite checks on your environment and implement vulnerability and patch management in it, based on a single instance of Kaspersky Security Center as Windows Server Update Services. They'll demonstrate all the advantages of using Kaspersky Security Center as a Windows Server Update Service, explain how vulnerabilities are found and updating procedures carried out, and show your team how to manage the module for optimum performance. (And they'll do it all remotely in within just 8 hours...)

To find out more about the Kaspersky Vulnerability and Patch Management service – why it's a great idea, service requirements, the full scope of work, and to ask any questions, [contact us now](#).
